How to Use Your Grout Reviver Kit

This guide will walk you through how to repair and refresh your grout using your Hemway Grout Reviver Kit. Follow these steps for a clean, even finish.

What's Included

- Grout reviver tube
- Profiling tools (for smoothing and shaping)

What You'll Need

- Clean cloth or sponge
- Mild cleaner
- Dry towel
- Gloves (optional)

Before You Start

Make sure the area is ready before applying the product:

- Clean the tiles and grout lines to remove dirt, grease, or residue
- Rinse and allow the surface to fully dry
- Remove any loose or crumbling grout

Applying to a clean, dry surface will help the product adhere properly.

1

Apply the Grout Reviver

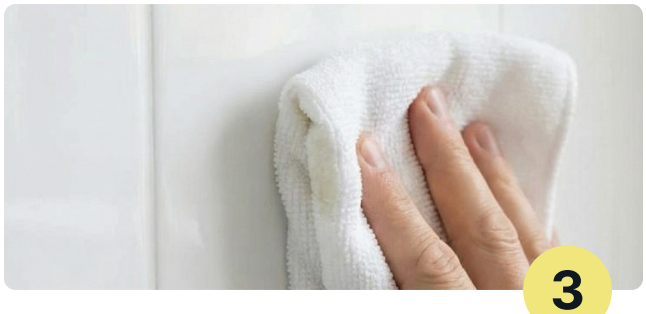

Apply the grout reviver directly along the grout lines using the nozzle. Work in small sections to keep the application manageable and prevent the product from drying before smoothing.

2

Smooth the Grout

Use one of the included profiling tools to smooth and shape the grout line. Hold the tool at a slight angle and run it steadily along the joint to create an even finish. Wipe excess product from the tool as you go.

3

Clean the Tiles

Before the grout dries, wipe away any excess from the tile surface using a damp cloth or sponge. Rinse your cloth regularly to avoid spreading residue.

4

Allow to Dry

Leave the grout to dry completely. Avoid touching or using the area while it cures.

Aftercare

- Keep the area dry for at least 24 hours
- Clean with a mild household cleaner
- Avoid abrasive pads or strong chemicals

Helpful Tips

- Test on a small, hidden area first if unsure
- Work in sections for best results
- If the grout line is very deep, apply in layers
- Keep a damp cloth near to quickly clean mistakes
